redefining range boundaries and accounting for test-specific variance, researchers are exposing a tiered landscape where high-IQ individuals differ markedly in cognitive profile, academic performance, and real-world outcomes. Understanding where a score falls within a refined range helps educators, employers, and individuals set realistic expectations. A person scoring 130–139, often labeled “high-average,” may excel in structured tasks yet require different support than someone scoring 150 and above, who typically shows stronger abstract reasoning but also heightened sensitivity to overstimulation. Recognizing these subtleties prevents misallocation of resources and reduces the stigma attached to the “gifted” label. Modern psychometric research divides the upper spectrum into three functional bands: High-Average (130–139): Consistently outperform peers in academic settings; benefit most from enriched curricula.
