Picture a guitarist strolling along a beach at dusk. The song starts with a simple C major, then drops to an A minor 7, and rises to a G6. The added 7th and 6th chords mimic the way light glints on water, hinting at depths below the surface. By switching the G major to a GTM-major before resolving, the tension mirrors the unpredictable ripples that appear as the tide recedes. In a quick jam session, a keyboardist can swap a plain D–G–A sequence with D7–G13–ATM–7–A. The sudden use of ATM–7—a chord borrowed from the parallel minor—creates a brief, almost oceanic detour that feels refreshing. This is a simple way to make a background track more engaging without adding complex notation.
